

Use-Case Flow Specification

UC-03: Submit Adoption Application

Primary Actor: Adoption Applicant

Supporting Actor: Shelter Staff

Related Use Case: UC-06 Complete Adopter Questionnaire

Preconditions

1. The applicant can access the Pet Adoption & Shelter Management System.
2. The selected animal is available for adoption and is marked as **"Ready for Adoption"** in the system.
3. The applicant has selected the animal they want to apply for.

Postconditions

1. The completed adoption application is saved in the system.
2. The adopter questionnaire is saved and linked to the application and selected animal.
3. The application is marked as **"Submitted"** for shelter staff to review.
4. If an application hold is used, the selected animal is kept unavailable to other applicants.

Main Success Scenario

1. The applicant searches for available pets and selects an animal.
2. The system shows the details of the selected animal.
3. The applicant selects **"Submit Adoption Application"**.
4. The system shows the adopter questionnaire.
5. The applicant fills in all the required information.
6. The applicant submits the completed questionnaire.
7. The system checks that all required fields have been filled in.
8. The system creates the adoption application and links it to the applicant and selected animal.
9. The system marks the application as **"Submitted"**.
10. The system shows a confirmation message that the application was submitted successfully.
11. The use case ends.

Alternate Flow — Incomplete Questionnaire

7a. Some required information is missing

1. The system finds that some required fields have not been filled in.
2. The system shows a message telling the applicant which information is missing.
3. The applicant goes back to the questionnaire and fills in the missing information.
4. The applicant submits the questionnaire again.
5. The system checks the information and continues from Step 8 of the Main Success Scenario.

Alternate Flow — Animal No Longer Available

2a. The selected animal is no longer available

1. The system checks the animal's current availability and finds that it is no longer available.
2. The system informs the applicant that they cannot submit an application for this animal.
3. The applicant is taken back to the available pets list.
4. The application is not created and the use case ends.
